Teradata University Network

About the Teradata University Network

The information systems field changes rapidly, and it is difficult for faculty and students to have access to up-to-the-minute instructional materials and state-of-the-art software. This need is being met through the Teradata University Network, a web-based portal for faculty and students in data warehousing, business intelligence/decision support, and database that is provided at no cost to the university. This content also can support **Introduction to IT** courses at the undergraduate and graduate levels.

The Teradata University Network currently has over 1,800 registered faculty members, from over 850 universities, in 71 countries, with thousands of student users. A key to the success of Teradata University Network is that it is led by academics.*

Faculty can choose from a variety of materials including:

> **course syllabi** used by other faculty

> **cases, projects, and assignments** (with teaching notes)

> **Teradata, MicroStrategy, and other software** (with learning materials)

> **access to large data sets, training materials, web seminars, and much more**

The software is available through an application service provider (ASP) arrangement. Faculty and students do not have to install software on their PCs. To apply for membership, click on **Join Now**. You will be asked to complete a brief registration form. After registration is authenticated (to assure faculty affiliation), you will able to use this valuable resource.

In addition to Teradata University Network, there is a free companion site for students, the Teradata Student Network, www.TeradataStudentNetwork.com. It contains a subset of the materials on TUN.

* Academic advisors include Jeff Hoffer (University of Dayton), Barbara Wixom, (University of Virginia), Michael Goul (Arizona State University), Thilini Ariyachandra (Xavier University), Babita Gupta (California State University Monterey Bay), David Douglas (University of Arkansas), Haluk Demirkan (Arizona State University), Lakshmi Iyer (University of North Carolina, Greensboro), Nenad Jukic (Loyola University Chicago), Robert Winter (University of St. Gallen), Hugh Watson (University of Georgia), and Paul Gray (Claremont Graduate University).
